

SmartCCTV

Service Overview

SmartCCTV is a subscription based service that provides a sophisticated video surveillance solution. Using a simple “plug and play” architecture it delivers a new CCTV experience, and can also integrate into any existing CCTV installation. SmartCCTV is designed to overcome the inherent challenges of a standard on-site recording solution; disk failure, limited remote access, monitoring service interoperability, and risk of video loss due to theft. Storing video off-site eliminates this single point of failure and provides access to both live and archived video anywhere, anytime, by a standard internet browser. With no software or hardware to upgrade new features can be enjoyed immediately as they become available.

SmartCCTV provides continuous video recording stored both off-site and locally creating an “always available” video recording system. The user friendly dashboard provides an intuitive video/event timeline that enables rapid search for alarms, open/close activity, guard tours, or any other alarm activation. All recorded video streams are secured and camera/time-stamped making the review process easy and efficient. Event-activated video clips are distributed in ‘real-time’ to designated users and are stored in the user’s account for video retrieval and review purposes.

SmartCCTV Gateway Options

Gateways are required to connect each camera to the SMARTCCTV service, each gateways comes complete with SmartCCTV gateway unit, 1 month of storage, power supply, data protection signage and an integrated buffer to provide business continuity. Pricing is applicable for up to 16 Camera’s
