

Ethernet Direct Access Service

Ethernet Direct Access Service comprises Ethernet point to point data circuits. The CP can only use Ethernet Direct Access Service to connect:

- (a) CP Site to End User Site
- (b) CP Site to CP Site
- (c) End User Site to End User Site

Within the Hull Area.

The Ethernet Direct Access Service cannot be used for connections which are outside the scope of those identified above, including:

- (a) where the usage is for the purpose of building or extending core network;
- (b) where the intent is to replicate core network; or
- (c) where there is onward connection to a point outside of the Hull Area.

Please refer to the Ethernet Connect Access Service where onward connection is required. Note that, except for the connectivity allowed under this Agreement, the Ethernet Direct Access Service must not be used for directly cabled NTE to NTE connection with any other KCOM provided service. KCOM will not be liable for any incidents, reduction in service performance or service failures which result from the Ethernet Direct Access Service being connected in a directly cabled NTE to NTE configuration or if Ethernet Direct Access Service is connected within the CP Site in a NTE-to-NTE configuration.

Excess construction charges

Connection Charges below apply to all installations where routing is determined by KCOM and there are no access impediments. Excess Construction Charges, subject to survey, will only be levied in exceptional circumstances such as the requirement for resilient circuits or, for example, requests for termination requiring substantial interior cabling.

Existing network connectivity

For this criteria to be met an optical fibre cable or cables containing spare optical fibres with which to provide the new Ethernet Direct Access Service or Ethernet Direct Access Services must be available within the CP's and/or End User's own premises / office or place of business this also includes both multiple tenancy units or multiple business units (see exceptions).

The exceptions are as follows:

- (a) If the CP's and/or End User's premises or the CP Site and/or End User Site contains multiple buildings the optical fibre connectivity for the new Ethernet Direct Access Service must be within the building or location where the Ethernet Direct Access Service is required and not contained externally in another building.
- (b) If an existing optical fibre cable is present within the building or location but contains no spare optical fibres available for connecting the new Ethernet Direct Access Service or Ethernet Direct Access Services.

- (c) KCOM maintain the right to designate optical fibres within a cable as spare for fault purposes and as such are not available for new CP and/or End User Ethernet Direct Access Services /connections.
- (d) Where the new Ethernet Direct Access Service is required within a building containing multiple business / tenancy units, the optical fibres required to provide the new service must not exceed a cabling distance of more than 25 metres from where the existing cable is terminated.

No existing network connectivity

This relates to installations where no optical fibre cable exists or where a cable does exist but has no spare optical fibre capacity available to provide the new Ethernet Direct Access Service. KCOM maintain the right to designate optical fibres within a cable as spare for fault purposes only and as such would not be available to provide a new Ethernet Direct Access Service for CPs and/or End Users.

Connection Charges - No Existing Network Connectivity				
Feature	Notes	Operative Date	Until	Connection Charge Ex VAT
EDAS 10Mb	a	01/04/2014		£2,600.00
